Sprint 1 Report

Product: WinRate

Team: WinRate Development Team

October 21, 2019

Actions to stop doing:
- Usage of firebase for data storage
  - We have determined that firebase is unnecessary for our program, since it focuses on the use of cloud storage when our project only needs local storage. We are moving on to use the Room SQL library instead.

Actions to start doing:
- Integrating branches
  - Currently all team members have their work on separate branches. By next sprint, we plan to have a standard master branch between us.
- Creation of Room Database
  - The necessary dependencies for the Room SQL library must be added to the project in order to begin using it to store data.

Actions to keep doing:
- None, development has just started thus there are no tasks to be carried over.

Work completed/not completed:
- None

Work completion rate:
- N/A
